Entries:

1) **Contract number:** All contract data about a consumption point are stored with us under this number. This simplifies the work considerably, as this information enables our employees to call up all important contract data in the accounting system. We therefore always need the contract account number for any queries.
2) **Statement number:** Each statement we send will have a designated statement number. This allows us to issue each statement to the right customer.
3) **Consumption point:** The consumption point is the location (address) at which you consume your electricity or gas/water and where the meter is located. This could be your flat or house, for example, or your garden, cellar or garage.
4) **Billing period:** The billing period is the period between two bills. The amount you are billed is based on the level of consumption during this period. This is usually a full year. However, if you have moved house, for example, this can also be less than a year.

Sparte	Menge/Einheit	5 Nettobetrag EUR	6 MwSt. EUR	7 Bruttobetrag EUR
Strom	1.385,00 kWh	410,50	19 % 78,00	488,50

Entries:

5) **Net:** The net sum is the amount you pay for your consumption. The turnover or value added tax is added to this amount on your bill. Together these give the actual gross amount to be paid.

6) **Turnover tax:** The prices of all of the goods and services you buy include a value added tax (VAT). This is currently 19% (electricity and gas) or 7% (water) of the net amount.

7) **Gross:** Everything we buy is subject to a specific tax. This is what is known as a consumption tax. This means it is levied on goods which are consumed in some way. This tax is referred to as a turnover tax, or sometimes a value added tax (VAT). It is currently set at 19% of a net amount. The net amount plus the VAT gives the sum you pay to us - the gross amount.

8) **Total sum:** The total sum is the total amount you have to pay for electricity, gas or water. We calculate this by comparing what you paid in advance in the previous year (advance payment) to the cost of your current actual consumption. Perhaps you have paid too much. Then you will receive a credit note. Or perhaps you have consumed slightly more. In this case, a supplementary payment is required.

9) **Paid discounts:** Sum of all monthly payments or payments that you have paid in the current period.

10) **December emergency aid:** Gas prices in Germany have risen enormously in recent months. Above all, the Russian attack on Ukraine has driven this further. Because this means that many people in Germany no longer know whether and how they should pay their energy bills, the federal government has decided on a relief package. One of the first stages is the so-called December emergency aid. In short: In December 2022, the state will take over the instalments of all gas customers who have a consumption of less than 1.5 million kilowatt hours.

11) **Credit:** In your statement, the advance payments are totaled and compared to your actual consumption. If you have paid more than you have used, an "existing credit" results. In this case you will get money back from us. If you have paid less than you have used, the result is an "amount still to be paid", which means that you still have to pay us something extra.

12) **Bank account details:** This is where we store your bank details. Please check these carefully on your statement.

13) **Advance payment sum:** Based on the size of your dwelling and the number of residents, we estimate your anticipated monthly consumption for the coming year. You then pay an equal amount each month for this estimated consumption. This is known as an advance payment.

14) **Settlement date:** We must receive your billed amount by the settlement date. If you have set up a standing order or direct debit, this will take place automatically.

15) **December emergency aid:** Gas prices in Germany have risen enormously in recent months. Above all, the Russian attack on Ukraine has driven this further. Because this means that many people in Germany no longer know whether and how they should pay their energy bills, the federal government has decided on a relief package. One of the first stages is the so-called December emergency aid. 16) **Meter number (electricity):** Every customer has a meter. In order for use to know exactly what type of meter it is, each meter has a number permanently assigned to it. This can be found on the front, either above or below the meter reading section.

17) **Initial meter reading:** The initial meter reading means the meter reading that was displayed on the meter at the beginning of a billing period. As a rule, this is only read if you no longer use the meter for any reason, for example if you move.

18) **Final meter reading:** The final meter reading is the meter reading displayed on the meter at the end of a billing period. As a rule, this meter reading is taken if you will no longer be using the meter for some reason, e.g. you are moving house.

19) **Energy price/basic charge:** Your tariff comprises an energy price and a basic charge. The basic charge includes the costs of connection (e.g. the costs associated with the electricity network), the electricity meter and our service. The basic charge is not based on your consumption. However, the commodity or energy price does. This is calculated according to your actual consumption. This is why this cost is given in cent/kilowatt hour.

20) **Billing period:** The billing period is the period between two bills. The amount you are billed is based on the level of consumption during this period. This is usually a full year. However, if you have moved house, for example, this can also be less than a year.

21) Meter number (gas): You can find your gas meter number on your gas bill, in your gas supply agreement, and on the gas meter itself. If your gas meter has been replaced recently, the meter number on your gas bill or in the gas supply agreement may no longer be correct. If in doubt, check the number on the meter itself. Every gas meter has a meter number which is uniquely assigned to a consumption point. You will often find the meter number of your gas meter next to a barcode. This is usually located on the lower part of the meter (outlined in blue).

22) Initial meter reading: The initial meter reading means the meter reading that was displayed on the meter at the beginning of a billing period. As a rule, this is only read if you no longer use the meter for any reason, for example if you move.

23) Final meter reading: The final meter reading is the meter reading displayed on the meter at the end of a billing period. As a rule, this meter reading is taken if you will no longer be using the meter for some reason, e.g. you are moving house.

24) Energy price/basic charge: Your tariff comprises an energy price and a basic charge. The basic charge includes the costs of connection (e.g. the costs associated with the electricity network), the electricity meter and our service. The basic charge is not based on your consumption. However, the commodity or energy price does. This is calculated according to your actual consumption. This is why this cost is given in cent/kilowatt hour.

34) Gross amount (wastewater): The gross amount results from the net amount to which the sales tax is added. That means: the gross amount is equal to the net amount plus taxes. In the case of wastewater disposal, however, there is a special feature: it is a so-called sovereign task of the public sector. And sovereign tasks are exempt from VAT or sales tax. So: in the case of wastewater disposal, gross equals net and vice versa.
